| Assessment Period   | July 2024 – July 2025 |                 |                                   |

| Scope Details                         |  |
|---------------------------------------|--|
| Main Species                          | Red mullet ( <i>Mullus surmuletus</i> )  |
| Stock                                 | ICES 4, 7.d and 3.a (North Sea, Eastern English Channel, Skagerrak and Kattegat) |
| Fishery Location                      | FAO 27 – Northeast Atlantic  |
| Management Authority (Country/ State) | EU   |
| Gear Type(s)                          | Danish seine, Otter trawl, Others  |
| Outcome of Assessment                 |  |
| Peer Review Evaluation                | Agree with recommendation  |
| Recommendation                        | PASS   |

## Table 2. Assessment Determination

| Assessment Determination  |
|---|
| <p>Red mullet (<i>Mullus surmuletus</i>) was assessed as a category D species considering that it is a Data Deficient species by the IUCN, it is not included in any CITES Appendixes, and no reference points are defined for this stock.</p> <p>In the Productivity-Susceptibility Analysis (PSA) the red mullet awarded an average productivity score of 1.42 and an average susceptibility score of 2.5 passing against Table D3, indicating that the stock is not vulnerable to the fisheries in North Sea, Eastern English Channel, Skagerrak and Kattegat.</p> <p>The red mullet by-product meets the Marin Trust requirements and it should be remained approved for use as a raw material.</p> |
| Fishery Assessment Peer Review Comments   |
| <p>The peer reviewer agrees that this red mullet stock should be assessed under Category D. The assessor has completed the PSA correctly and the peer reviewer agrees that the assigned scores result in a PASS outcome on Table D3. For this reason, the byproduct should remain approved for use as a raw material.</p>   |
| Notes for On-site Auditor   |
| <p>There are no concerns that requires attention from the on-site assessor</p>  |

## Species Categorisation

**NB:** If any species is categorised as Endangered or Critically Endangered on the IUCN Red List, or if it appears in CITES Appendix 1, it **cannot** be approved for use as a MarinTrust raw material.

### IUCN Red list Category

By-product material from a species listed by IUCN (the International Union for Conservation of Nature) under the Red List for the following categories shall immediately fail the assessment;

- EXTINCT (E) AND EXTINCT IN THE WILD (EW)
- CRITICALLY ENDANGERED (CR) facing an extremely high risk of extinction in the wild.
- ENDANGERED (EN) facing a very high risk of extinction in the wild.

By-product material may be used from the following categories provided that all clauses in the MarinTrust standard are passed.

- VULNERABLE (VU) facing a high risk of extinction in the wild.
- NEAR THREATENED (NT) does not qualify for above now, but is close or is likely to qualify for, a threatened category in the near future.
- LEAST CONCERN (LC) Widespread and abundant.
- DATA DEFICIENT (DD) and NOT EVALUATED (NE)

## Table 3 Species Categorisation Table

| Common name | Latin name               | Stock  | Management | Category | IUCN Red List Category <sup>1</sup> | CITES Appendix 1 <sup>2</sup> |
|-------------|--------------------------|--|------------|----------|-------------------------------------|-------------------------------|
| Red mullet  | <i>Mullus surmuletus</i> | ICES 4, 7.d and 3.a (North Sea, Eastern English Channel, Skagerrak and Kattegat) | No         | D        | Data Deficient <sup>3</sup>         | No                            |

## CATEGORY C SPECIES

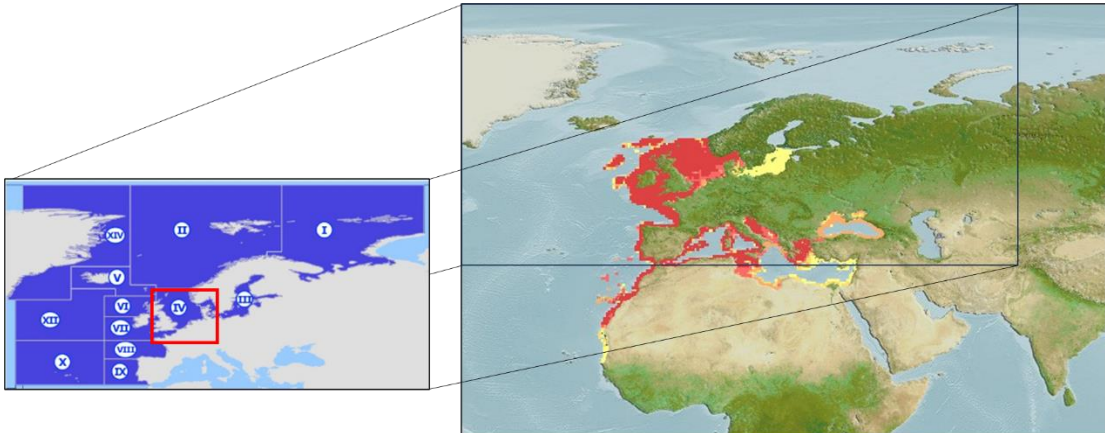

In a by-product assessment, Category C species are those which are subject to a species-specific management regime and are usually targeted species in fisheries for human consumption.

Clause C1 should be completed for each Category C species. If there are no Category C species in the fishery under assessment, this section can be deleted. Where a species fails this Clause, it should be assessed as a Category D species instead.

| Species Name   |   | NA   |                        |
|--|---|--|------------------------|
| <b>C1</b>  | <b>Category C Stock Status - Minimum Requirements</b> |  |                        |
|  | <b>C1.1</b>   | Fishery removals of the species in the fishery under assessment are included in the stock assessment process, OR are considered by scientific authorities to be negligible.  |                        |
|  | <b>C1.2</b>   | The species is considered, in its most recent stock assessment, to have a biomass above the limit reference point (or proxy), OR removals by the fishery under assessment are considered by scientific authorities to be negligible. |                        |
|  |   |  | <b>Clause outcome:</b> |
| <p><b>C1.1 Fishery removals of the species in the fishery under assessment are included in the stock assessment process, OR are considered by scientific authorities to be negligible.</b></p> <p><b>C1.2 The species is considered, in its most recent stock assessment, to have a biomass above the limit reference point (or proxy), OR removals by the fishery under assessment are considered by scientific authorities to be negligible.</b></p> |   |  |                        |
| References   |   |  |                        |
| Links  |   |  |                        |
| MarinTrust Standard clause   |   | 1.3.2.2  |                        |
| FAO CCRF   |   | 7.5.3  |                        |
| GSSI   |   | D.3.04, D5.01  |                        |

## CATEGORY D SPECIES

Category D species are those which are not subject to a species-specific management regime. In the case of mixed trawl fisheries, Category D species may make up the majority of landings. The comparative lack of scientific information on the status of the population of the species means that a risk-assessment style approach must be taken.

|           |  |  |              |
|-----------|--|--|--------------|
| <b>D1</b> | <b>Species Name</b>  | <b>Red mullet (<i>Mullus surmuletus</i>)</b>         |              |
|           | <b>Productivity Attribute</b>  | <b>Value</b>   | <b>Score</b> |
|           | Average age at maturity (years)  | 3.2 <sup>1</sup>                                     | 1            |
|           | Average maximum age (years)  | 12.9 <sup>1</sup>                                    | 2            |
|           | Fecundity (eggs/spawning)  | 19,640-83,448 <sup>2</sup>                           | 1            |
|           | Average maximum size (cm)  | 40 <sup>1</sup>                                      | 1            |
|           | Average size at maturity (cm)  | 20.6 <sup>1</sup>                                    | 1            |
